Chapter 1

Introduction

This book is designed to provide a friendly introduction to various aspects of Rise so you can more easily follow along in your game. However, it is light on specific rules and details. In general, it assumes that you are using a character sheet that someone else in the game is responsible for creating and maintaining. For a more detailed explanation of Rise's rules and character customization, see the separate Comprehensive Codex. The GM will also have a Tome of Guidance, which has advice for running the game and rules for various monsters and antagonists that you may face.

What Is Rise?

Rise is a tabletop role-playing game, or TTRPG. In Rise, you play as a specific character in an imaginary universe. Your character can try to do anything you can describe in a world that the game master, or GM, creates. Of course, you won't always succeed. Usually, your character will go on adventures with other characters, each of which is played by other players. Together, you will create and experience a story with the Game Master, or GM, who defines the universe that the player characters inhabit.

How to Play - The Short Version

When you are learning Rise, you should generally focus on roleplaying as your character in a fantasy universe. The GM can provide details about the expected tone of the game and the universe your character inhabits. For example, they should be able to help you understand whether they expect the game to be fundamentally silly, serious, or both. There isn't a correct answer to that sort of stylistic question, but everyone should be on the same page about what they want.

Sometimes, when your character tries to do something particularly interesting, the GM will ask you to roll to see if you succeed. When that happens, roll a ten-sided die, or d10, and tell them the result. They may ask you to add a relevant number based on how good your character is at that thing. If they do, find that statistic on your character sheet and add that number to what you rolled on the d10. Your character will succeed if your result is high enough, and otherwise will fail. The GM will describe what happens in either case.

If you get into combat, you don't need to keep perfect track of what the other players are doing. Just be able to describe what your character wants to do when the GM asks, such as attacking or running away. You may take damage from enemy attacks. Damage first reduces your character's damage resistance. Once that reaches zero, damage will reduce your character's hit points. If those reach zero, your character may become vitally wounded. Try to avoid that.

Attacking is basically the same taking any other action with a chance of failure. Generally, you'll have at least one ability on your character sheet that does damage. You roll d10, add a relevant number, and see if it is high enough. If you succeed with the attack, you'll generally roll damage. Damage is the only common roll in Rise that doesn't always use a d10. Your character sheet should tell you what dice you roll to deal damage.

That's the absolute minimum information you really need to get started, as long as you have a helpful GM and fellow players. Over time, you'll get used to playing your character, both in terms of their personality and in terms of the rules. If you want to learn more about how Rise works, you can keep reading!

What Makes Rise Different?

If you haven't played other tabletop role-playing games, feel free to skip this section. If you're a TTRPG veteran, you may wonder what makes Rise unique in a crowded sea of games. Rise has five fundamental principles that differentiate it from other TTRPGs: minimal resource management, simultaneous combat, optional complexity, unbounded scaling, and a bounded action economy.

Minimal Resource Management

Many games make use of resources like mana, spell slots, or timed cooldowns to limit how often characters can use their abilities. These systems have fundamental problems that undercut the fun and flow of a TTRPG, and Rise essentially does not use resources to limit character ability usage. In Rise, characters can cast spells or use special attacks any number of times in a row without consuming resources.

Some systems have resources that are designed to ebb and flow in the course of a typical combat. You might expend mana to use a powerful spell, and then regain mana over time by using weaker spells or fulfilling certain conditions. Alternately, you might use a spell and then wait some number of in-game turns before you can use that same spell again. This can be fiddly to track and hard to recover from if you forget what happened to your resource pool, which is why this approach is more common in video games than in TTRPGs. More importantly, this system has no clear way to handle ability usage outside of combat. It effectively gives unlimited ability usage when time is no obstacle, but only in an awkward and convoluted way. This category of system is unsuitable for Rise because it is too fiddly in combat and doesn't make sense out of combat.

Some systems have finite-use resources that are tied to the expenditure of in-game time, such as taking long rests, or session breaks. You might spend a spell slot to use a powerful spell, and then be unable to cast that spell again until your character rests for some period of time. This can be manageable from a complexity perspective if the number of unique resources is small. However, it can get dangerously convoluted if characters have a large number of separate or partially interchangeable resource pools, such as using separate pools for individual spell levels.

The real problem is that this limitation requires you to make your decisions based on not just the current situation, but also on your prediction of all future situations you will encounter before you have the opportunity to rest. This contributes significantly to the tactical complexity of deciding each individual action in combat, which slows down the pace of the game. It is also punishing to newer players who have less experience with the metagaming required to deduce how many resources an individual fight is worth. This strategic complexity is compounded if hit points are treated as an additional resource, since you now have to trade off the potential impact of one limited resource against another limited resource.

Optimization of resource usage can be unintuitive and out of character, but failure to correctly manage your resources can leave you with no useful abilities remaining. This concern can be exacerbated

if some characters are extremely resource-intensive while others have no meaningful resources to track. No one likes being forced to hide from a difficult fight or take only insignificant actions while your more resource-savvy or resource-independent allies continue using dramatic and powerful abilities. It can also add stress to the party dynamics when one character frequently asks for long rests after fights because they expended resources and no one else needs to rest. This category of system is unsuitable for Rise because it creates complexity in ways that detract from the fun and narrative of a game instead of adding to it.

Rise does not use resources to limit normal actions in combat. The vast majority of spells, special martial attacks, and other abilities that affect enemies or your environment can be used any number of times. There are a small number of abilities with one-round cooldowns, and a universal ability that can only be used once per short rest. However, there is no time tracking in the system longer than "next round". Small cooldowns are a fine-grained balancing tool that allow characters to have powerful abilities which would have detrimental effects for the game if they could be used every turn.

Rise does use a single universal resource, called "fatigue", that recovers based on long rests. This allows some opportunity for characters to invest extra effort into specific difficult fights, and to become tired after a long day. Normal damage taken during a fight is easily recovered after a ten minute rest. This means that you typically don't have to track state between fights. However, a GM can prevent that rest time with multiple sequential fights to increase difficulty and drama.

Overall, Rise uses resource limitations very sparingly. This allows it to gain some of their benefits while avoiding the detrimental effects that come from making resource limitations a fundamental part of the system.

Simultaneous Combat

In most TTRPGs, combat takes place in a series of turns. When your turn comes up, you take all of your actions, and then you wait through everyone else's turn until your turn comes again. This system has one foundational disadvantage: it is very, very slow. Rise uses a simultaneous combat system that dramatically increases the pace of combat.

Imagine a typical 4-5 player game with 1-2 enemy groups using a traditional turn-based initiative system. In this scenario, you have to wait through about 5 turns before it comes back to your turn. This number can increase significantly in large-scale fights. Each of those 5 or so turns can meaningfully change the battlefield situation on its own by moving, weakening, or defeating various enemies and allies. The state of the battlefield at the end of last turn is often drastically different than the state of that battlefield at the start of your new turn. Player coordination can be challenging, since they must coordinate in the specific order assigned by the initiative system, and enemy turns can intervene to ruin coordinated plans.

In theory, every player should accurately track the unfolding battlefield state through each of the intervening turns. That would mean everyone would know what to do when their turn comes up. In practice, many players find that difficult or impossible. Instead, at the start of each of their turns, they ask or try to figure out how the situation has changed. Not everyone asks this explicitly, but it must always be analyzed anew.

Once a player understands the current battlefield state, they can finally decide their actions. This typically involves both movement and any number of sequential attacks, so there are many factors to consider. Everyone else must wait and do nothing while this happens. Once the active player has decided their actions, those

actions must be fully rolled and resolved before combat can proceed. Even the next player in the initiative order may not be able to make accurate plans during this time, since the die rolls can change those plans. All of this combines to make even short combats take an hour or more, and six-person adventuring groups can feel dangerously bloated.

Rise works differently. Combat in Rise is broken up into two phases: the movement phase and the action phase. During the movement phase, all creatures move simultaneously, and no attacks are possible. Characters can declare certain simple reactive movements like “stay adjacent to this enemy” to ensure that they end up in a reasonable position regardless of enemy actions. If the movements of characters conflict in impossible ways, initiative checks can temporarily force a linear order of resolution. Each player declares their own actions in an arbitrary order as soon as they decide them, so people are not forced to wait and do nothing while slower players contemplate their choices. Player coordination is easy, since all actions are happening together.

During the action phase, players resolve their actions sequentially, but in an arbitrary order of the players' choice. This allows slower players to make their decisions when they are ready, while allowing faster players to resolve their actions first. Since movement during the action phase is rare, and enemies cannot unexpectedly move, players are typically able to decide their actions much more quickly and easily even when they have a large number of unique abilities to choose from. Once all players have resolved their actions, they learn what their enemies did. Those actions all resolve simultaneously, so enemy actions cannot interrupt player actions and vice versa. Attackers are always responsible for rolling instead of using “saving throws” or similar mechanics that force defenders to roll dice. All of this means that players can choose and resolve their actions simultaneously and efficiently, minimizing total time spent in combat while still allowing significant tactical complexity.

The start of each phase still requires a general assessment from all acting players about the current state of the battlefield, which takes just as much time as the assessment in a classic initiative system. However, the time required for this tactical analysis only increases marginally as the number of players and enemies in the game increases. This allows Rise to handle large player counts or large enemy hordes without becoming glacially slow. Combat in Rise flows by quickly, making it much easier to balance time between combat and non-combat encounters within the same game session - or to run through multiple separate, individually challenging combats without sacrificing the pace and energy of the game.

Optional Complexity

Many games operate at a consistent level of complexity. Many rules-light games are always simple, and many rules-dense games are always complex. This is a perfectly reasonable design philosophy. Among other benefits, it makes it easy to know what to expect from the game, which helps give the game a well-defined niche.

Rise is designed to allow players to choose their own level of complexity. This broadens its potential audience by allowing people

with very different play styles or tolerances for complexity to enjoy the same game together. This goal is manifested in several key ways in Rise’s design:

- Core gameplay is designed to be simple.
- Character creation is deeply interconnected.
- Complexity is not tied to narrative roles.
- Character power does not require complexity.

Simple Core Gameplay

The core gameplay loop must be simple. You can contribute in combat by relying on one or two standard attacks that you use in all circumstances. In narrative situations, you can just roll the skills you have trained, and ignore other options. Engaging with the system more deeply than that is a choice, not a requirement.

Interconnected Character Creation

Character creation and build optimization is a better place to store complexity. Creating a Rise character involves a number of decisions, each of which can have nuanced ramifications on other aspects of the system. If you are just trying to build a character that matches a desired narrative, you can generally approach each decision in isolation.

For example, you can decide that your character is intelligent and agile but not very strong or durable, because that is the concept you want. That decision has consequences, such as changing how many trained skills you have and what your defenses are. If you approach each decision sequentially, each one is relatively easy to make, and doesn’t require deep system knowledge. On the other hand, trying to mathematically optimize a character requires thinking about many aspects of the system at once. This results in a system that is easy to learn but hard to master.

Even for simple characters, the process of character creation is still one of the most complicated aspects of Rise. That is why Rise provides (or will provide, once that section is done) an extensive selection of premade characters for a wide variety of narrative archetypes. Each premade character includes advice for how to play that character and level them up. The premade characters make the system more accessible to people who don’t want to deal with the complexity of creating a character from scratch.

Complexity and Narrative

Complexity and simplicity should not be directly connected to a character’s concept or narrative. For example, it would be a bad idea to define a system where martial characters are simple and spellcasters are complicated. Both of those are rich and evocative narrative constructs. Many people who don’t enjoy complexity will want to play spellcasters, and many people who enjoy complexity will want to play martial characters. Gameplay complexity must be more finely tuned and localized than those sweeping strokes.

In Rise, gameplay complexity is generally generated by acquiring a large number of increasingly situational abilities. Every class has some archetypes that grant additional abilities known and some archetypes that grant additional passive abilities. If you like having a lot of unique abilities, you can have a high Intelligence to maximize your insight points, and focus on learning spells and

maneuvers that attack your enemies or have situational effects. If you like minimizing complexity, you can instead choose archetypes or learn spells that simply grant you passive benefits, and focus on one or two standard attacks that you specialize in. Some feats give you new abilities and new circumstances to pay attention to that make you more effective, while others simply increase your passive statistics and defenses.

Rise specifically handles complexity for martial characters and spellcasters slightly differently. Martial characters in Rise typically have fairly simple individual abilities. However, they can use those abilities with a variety of meaningfully different weapons. A martial character with four unique attacks and three different weapons has twelve different options in combat. In addition, martial characters can typically make better use of universal abilities, such as shoving and grappling.

Spellcasters have more complex and varied individual abilities. They also tend to have more abilities that have significant narrative effects. However, their abilities are more isolated. There is no spellcaster equivalent of martial weapons that would multiply their number of distinct abilities in combat. The result of this design is that both martial characters and spellcasters can be very simple or very complicated. However, they approach complexity in different ways, ensuring that they feel narratively distinct.

Complexity and Power

All of this customization of complexity would be mostly pointless if complexity was strongly correlated with character power. If exceptionally complicated or hyper-specialized characters were obviously and consistently more effective than other characters, it would push everyone to use those characters. Rise structures the tradeoffs between gaining raw power and gaining additional options balanced enough that neither is always superior.

There will always be some benefit from build optimization and system mastery. Players who are deeply familiar with Rise will be able to build characters with more relevant strengths and fewer relevant weaknesses. However, the gap between optimized characters and “normal” characters is limited. There will always be specific contexts where one character’s mechanics are superior to another’s. For example, a specialized defensive melee character may excel in a duel in a confined space. However, it may be irrelevant against cavalry archers on an open field. Characters in Rise cannot drastically change their capabilities each day, so they will always have moments to shine and moments of weakness.

Unbounded Scaling

Some systems use bounded bonuses for accuracy or other game statistics. Bounded scaling means that every character of the same power level - or in some systems, of any power level - has a similar chance of success with any given skill check or attack roll. This can frequently cause narratively inappropriate and even comical events, and Rise explicitly rejects this philosophy.

Imagine a typical party of four players, with one character being exceptionally skilled at a particular task. Perhaps the rogue is exceptionally skilled at lying, or a barbarian is exceptionally skilled at climbing. If “exceptionally skilled” only means that they have a +5 bonus on a d20 compared to +0 from the rest of the party, the exceptionally skilled character will only get the best result in the party half the time. The other half of the time, some other character with no relevant skills will meet or exceed the skilled character’s result - sometimes by a dramatic margin. When failure compared to rank amateurs happens this often, it becomes hard to take seriously the idea that any character can be exceptionally skilled at anything.

Rise characters can have dramatic statistical differences between each other, even at low levels. It uses a d10 as the fundamental die, which makes every bonus more significant. In addition, a 1st-level character can easily reach a +6 bonus with a skill check that is particularly relevant to their character. This means that a skilled character can beat a party of rank amateurs 80% of the time, and at higher levels their success becomes completely guaranteed. Likewise, the difference in Mental defense between a powerful sorcerer and a cowardly rogue can allow mind-affecting attacks to almost always hit a rogue while almost never hitting the sorcerer. These statistical differences do not always grow with level, but they remain significant at every level.

One advantage of systems with bounded scaling is that it is easier to guarantee that every character is relevant in any situation. Even if your character has no useful abilities of any kind, you might sometimes succeed on important actions through sheer luck. However, this design philosophy often breaks the symmetry between magical and non-magical characters. Magical characters can often use extremely specific and powerful abilities that are impossible for nonmagical characters to duplicate. If magical characters also have similar odds of success with all generic mechanics of the game, they will almost certainly have far more influence over the narrative of the game than any nonmagical character can hope to match.

The philosophy of Rise is that it’s okay for some characters to be irrelevant in specific contexts. It’s good to give people time in the spotlight where their character’s abilities help solve the specific problem that the group is facing when no other character could. Rise encourages that, and makes it impossible for one character to be relevant in *all* contexts. Each character has their own strengths and weaknesses, and if you try to be good at everything, you’ll fall behind people who specialize in a particular area. This will naturally rotate the spotlight between different characters, allowing each player to feel relevant and important in turn.

This dramatic scaling is also used to govern the power of characters over time, in addition to the power of characters relative to each other. Rise attempts to model a massive power range for player characters. They are expected to start their journeys at level 1 as little more than commoners, and by level 21 they are effectively demigods who can alter the fate of entire worlds. This is a critical part of the narrative fabric of Rise, and it is reflected in the statistics and abilities of characters. If a level 1 kobold posed even a tiny threat to a level 21 character, the mechanics of the game would sabotage the purported narrative of power and growth. In Rise, overall character power doubles approximately every two to three levels. The system takes some care to avoid bloating numbers to unwieldy levels on this journey, and the use of the d10 as the standard die helps immensely.

Bounded Action Economy

It is dangerous to give characters too many actions each turn. Each additional action a character can take increases how difficult it is for a player to decide what to do on their turn. In addition, each additional action increases the complexity of the change between the start of the turn and the end of the turn. This is especially risky with Rise’s simultaneous initiative system, which combines the actions taken by all characters into a single resolution process.

Rise places significant limitations on how many relevant actions each character can take on their turn. Generally, characters can only move during the movement phase and then take one significant action each turn. Some characters can use a minor action to accomplish something useful. However, that essentially marks the end of action economy scaling, even up to the maximum level.

Detrimental effects that could deny actions are also heavily limited. Total action denial effects are only usable by high level characters, and even then they only work against weak enemies or enemies that have already been significantly damaged. Taking actions is

fun, and sitting quietly while everyone else does things can be very frustrating. Similarly, completely removing an enemy's ability to act can easily remove the tension from a fight before it's actually over.

Chapter 2

How to Play

Saying What Your Character Does

There are two basic modes that you can use to describe how your character acts. You can describe in general terms what you want them to do, and let the GM figure out how to translate that into game mechanics. Alternately, you can say that you're using a specific ability or game mechanic, and let the GM figure out how that affects the narrative universe.

Either approach is generally reasonable. Some people tend to prefer using one mode more often, and some GMs generally prefer to hear one mode. When in doubt, communicate at your table!

Describing Actions

With this style of communication, you describe what you want your character to do. For example, you can say that your character steps out of their room in the inn and walks over to knock on a friend's door. Although Rise has rules that could govern some aspects of that scenario, such as an Awareness check to see if your friend notices you knocking, you wouldn't usually reference those rules explicitly. Even in the unlikely scenario that your friend doesn't notice you knock the first time, you can just knock again, so there's no point in worrying about the details. If something seems reasonable, it probably is, and you don't need to worry about the fiddly bits.

Sometimes, when you describe what your character tries to do, the action has a narratively relevant chance of failure. Instead of knocking on the door to say hi, you might only have time to bang on it once to warn your sleeping friend about an attack from assassins. In that case, there's some chance that your friend is sleeping too deeply to notice the noise the first time you knock. You could try knocking again, just like in the first scenario, but in this scenario that failure would cost you valuable time to survive the attack. In that scenario, you would roll a die to determine whether you succeed in your action - or in this case, whether your friend would succeed in their attempt to notice you.

Using Specific Abilities

Instead of describing broadly what you want to have happen, you might choose one of a list of clearly defined abilities that your character can use. Every character has specific abilities unique to them, such as a wizard's spells or a fighter's maneuvers. There

are also a number of simple abilities that anyone can use, such as the [grapple](#) or [trip](#) abilities. These universal abilities attempt to adequately describe a wide variety of reasonable improvised actions that you might try to use in combat.

Explicitly defined abilities have rules for determining what happens when you use them. Some abilities, such as attacks in combat, require rolling dice to determine how effective they are. Of course, you can use your character's abilities at any time, not just in combat. Abilities such as the [create water](#) or [distant hand](#) spells can be used to solve other kinds of problems entirely.

Rolling Dice

When you need to determine whether something succeeds or fails, you roll a die. This can happen as part of using a specific ability that tells you exactly what to roll, or because you tried to narrate your character taking an action that has a dramatically relevant chance of failure. In either case, you'll roll a single ten-sided die, also known as 1d10. You'll add some modifier that represents how skilled your character is at the particular thing that they are trying to do. At the GM's discretion, they may also give the roll an extra bonus or penalty based on the circumstances that your character is in. If your die roll is high enough, your character succeeds at whatever they were trying to do. Otherwise, your character fails, which may sometimes have additional consequences.

In Rise, it's entirely possible for characters to be so skilled that they succeed at what they are trying to do even if you roll a 1. Likewise, there are tasks that are so obviously impossible for your character that they cannot possibly succeed. In those cases, there's no reason to roll! Of course, the GM is the final arbiter of whether rolling is necessary. They may have information that the players do not.

In some cases, you roll multiple dice at once. This generally happens when you deal damage in combat. A collection of dice is called a [dice pool](#). Dice pools are written with the number of dice, followed by "d", followed by the size of dice to roll. For example, 2d6 means you roll two six-sided dice.

Making Checks

Checks are required to perform actions that have a chance of failure where the difficulty is not measured by the defense of another

creature or object. For example, climbing a wall or remembering an obscure piece of trivia may require a check.

To make a check, roll 1d10 and add your modifier with the check. You compare that result to a **difficulty value** that represents the difficulty of the task. The more difficult the task, the higher the **difficulty value** will be. If your result is equal to or higher than the **difficulty value**, the check succeeds. This usually means you accomplish a task successfully. Otherwise, the check fails. This usually means that nothing happens, though sometimes there are specific consequences for failure.

Critical Success

If your check result is at least 10 higher than the **difficulty value**, your check is a **critical success**. Some checks have a special effect on a critical success. For example, a critical success while climbing means you move twice as quickly.

Standard Difficulty Values

Most checks are made against a fixed **difficulty value** that represents how hard the task is. Detailed rules for determining difficulty values in specific circumstances can be found in the Expanded Skills chapter from the Tome of Guidance. However, most of the time, it's not worth the effort to consult charts and tables to figure out how hard a task is. Instead, you can estimate it based on the guidelines below.

- **Easy (DV 0):** Only an exceptionally incompetent or impaired person could possibly fail a DV 0 check. For example, this includes walking on rough ground without tripping (Balance) or noticing that a yelling, red-faced person is angry (Social Insight).
- **Average (DV 5):** A typical human with no relevant skills should still succeed at a DV 5 check without much issue. However, it would be possible to fail in a stressful situation where time is limited if the person had no relevant training. For example, this includes climbing a ladder (Climb) or hearing the topic of a nearby conversation in a crowded bar (Awareness).
- **Hard (DV 10):** A typical human with no relevant skills might succeed at a DV 10 check, but only if they were very lucky or had a lot of time on their hands. An experienced practitioner might fail infrequently in stressful circumstances, but a world-class expert would never fail. For example, this includes swimming in fast-moving water (Swim) or providing first aid to mitigate a barely lethal wound (Medicine).
- **Very Hard (DV 15):** Only an experienced practitioner could succeed at a DV 15 check, and they would still need to get lucky if they were in a rush. Even a world-class expert at the peak of real-world human potential could fail, but only rarely. For example, this includes picking a well-made lock (Devices) or holding your breath for eight minutes while staying still (Endurance).
- **Almost Impossible (DV 20):** A world-class expert like an Olympic medalist could succeed at a DV 20 check if they were lucky or patient. Succeeding consistently at tasks of this difficulty requires superhuman capabilities. For example, this

includes climbing a weathered natural rock wall without equipment (Climb) or squeezing through a space with a diameter of only half a foot (Flexibility).

- **Impossible (DV 25+):** No real-world human can succeed at a DV 25 check. This sort of feat is only possible for high-level Rise characters who have explicitly surpassed ordinary limitations. For example, this includes running at full speed along a slack rope (Balance) or climbing a sheer glass pane (Climb).

Trying Again

You can think of checks as being broadly divided into two categories: checks that give you information, and checks that cause a change in the world around you. In general, you can retry checks that change your environment indefinitely until you succeed. The only major limiting factor to those checks is that failure sometimes also changes your environment in ways that may punish your failure or make it impossible to retry the check. For example, if you are trying to climb a cliff, you can keep trying until you succeed, but you may take **falling damage** from falling off while halfway up the cliff.

You generally cannot retry checks that give you information unless the situation changes in a way that is relevant to your check. This generally means that you must learn new information before making the check again. For example, if you've already examined a creature to determine whether they are disguised, you can't keep just keep staring that creature to make sure. However, if you splash the creature with water which washes away some makeup, you can try again now that you have more information.

In addition, checks that require a free action to make can never be made more than once for the same purpose within a round.

Opposed Checks

An opposed check involves multiple creatures competing to get the highest result. In case of a tie, all tied creatures roll again to break the tie. Usually, the creature with the highest result succeeds, while all other creatures either fail completely or simply succeed less effectively depending on the situation.

Some opposed checks involve multiple creatures using the same skill to see who does the best job. For example, a climbing race up a wall might involve each participant rolling a Climb check, or you might make a Strength check to hold a door closed while another creature tries to shove it open. Alternately, it can involve creatures rolling opposite skills. For example, if you are trying to hide, you roll a Stealth check opposed by the Awareness check of any creatures who could notice you.

Not all opposed checks require all participants to roll at the same time. For example, a creature who creates a disguise rolls the Disguise check at the time that the disguise is created. A creature who tries to notice the disguise would roll their Awareness check at the time they see the disguised creature.

Hidden Checks

The GM can always make checks on your character's behalf without telling you. Generally, this is used for observation-based skills. For example, it's very suspicious if the GM tells you to make an Awareness check and then tells you that you don't see anything interesting. One of the ways a GM can avoid that is by simply rolling a check on behalf of your character and only telling you the result if you succeed.

Helping On Checks

You can help an ally make a check. To help an ally, you make a check of the same type against a difficulty value that is 5 lower than the regular difficulty value. This has the same requirements, including time and physical contact, as the check would have if you made it yourself. For example, to help an ally climb a cliff, you must be able to touch your ally to guide them up. Success means that the ally gains a +2 bonus to the check.

Multiple creatures can try to help the same person. At the GM's discretion, there may be a practical limit to how many people can assist with the same task. The bonus from multiple creatures helping does not stack. It just makes it more likely that the helping attempt will succeed.

Checks for Timed Tasks

For every 5 points by which you beat the difficulty value to accomplish a timed task, the time required is usually halved. This only applies for tasks that have a base time requirement of at least one minute, if the GM agrees that it is relevant, and if there are no other specific ways in which your result is improved with higher check results.

Defining the Undefined

This book does not attempt to include specific rules for every aspect of a realistic world. Unless defined otherwise - or if it's not worth the effort to look up Rise's exact rules in the flow of a game - you should assume that the universe works more or less like the real world does, and as long as everyone agrees that something is reasonable, it's not worth worrying about in more detail.

For example, Rise does not have specific rules for how long it takes to eat a meal, the arc that a thrown ball takes through the air, or how much extra weight a well-made chandelier can hold without breaking. It's possible to imagine situations where each of those might be important to a game, however, so you'll have to guess what would be reasonable as obscure situations arise. The Game Master has the final word when defining ambiguities like this.

Resolving Ambiguity

When the rules are ambiguous about how they apply to you and no other creature, you decide how to resolve that ambiguity. For example, if an ability causes you to remove one of your vital wounds, and you have more than one vital wound, you choose which vital wound is removed. When the rules are ambiguous in any other

situation, the GM decides how to resolve that ambiguity. This includes situations where multiple creatures are relevant and situations where no particular creature is relevant.

Chapter 3

Characters

In Rise, you play as a character with a variety of unique abilities. This section provides an overview of how characters are defined. It assumes that the GM will provide a character for you or help you make your character. For full details about how to create a character yourself, see the separate Comprehensive Codex.

Species

There are eight common species.

- Human: Common and capable of anything
- Dwarf: Slow and steady, with famous beards
- Elf: Graceful, frail, and extraordinarily long-lived
- Gnomes: Magically inclined tinkers
- Half-elves: Diplomatic and versatile
- Half-orc: Strong and physically versatile
- Orc: Strong and intimidating

Attributes

There are six fundamental attributes. A character's attributes have broad effects on many aspects of their statistics.

- Strength: Muscle and physical power
- Dexterity: Hand-eye coordination, agility, and reflexes
- Constitution: Health and stamina
- Intelligence: Learning, reasoning, and versatility
- Perception: Observation, awareness, and precision
- Willpower: Mental resilience and magical potential

Combat Statistics

There are five main combat statistics.

- Accuracy: This affects how likely you are to hit with attacks.
- Damage resistance: This affects how much damage you can shrug off easily.
- Defenses: These affect how likely you are to avoid being hit by attacks.
- Hit points: This affects how much damage you can take without vital injury. Some special abilities have detrimental effects on you if they make you lose hit points, but not if they only make you lose damage resistance.

- Power: This affects how much damage you deal with attacks. You have two types of power: **magical** ✨ power and **mundane** power.

Resources

There are three main resources.

- Attunement points: This affects how many spells and items you can benefit from simultaneously. It typically comes from wearing armor.
- Fatigue: This affects your accuracy and checks. It typically comes from using special abilities.
- Insight points: This affects how many special abilities you know, such as spells and maneuvers.

Narrative Customization

A character also has an alignment, age, appearance, and similar traits that anchor them in the world. Generally, these do not have any mechanical effects, but they are an important part of designing a complete character. For details, see Alignment, page ??, Personal Appearance, page ??, and Backgrounds, page ??.

Classes

Each character has at least one class. A character's class has a significant influence on their special abilities and narrative style. The eleven classes are briefly summarized below.

- Barbarians are primal warriors who draw power from their physical prowess and unfettered emotions.
- Clerics are divine spellcasters who draw power from their veneration of a single deity.
- Druids are nature spellcasters who draw power from their veneration of the natural world.
- Fighters are highly disciplined warriors who excel in physical combat of any kind.
- Monks are agile masters of "ki" who hone their personal abilities to strike down foes and perform supernatural feats.
- Paladins are divinely empowered warriors who exemplify a particular alignment.
- Rangers are skilled hunters who bridge the divide between nature and civilization.

- Rogues are skillful and versatile characters known for their ability to strike at their foe's weak points in combat.
- Sorcerers are arcane spellcasters who draw power from their inherently magical nature.
- Warlocks are pact spellcasters who draw their power from a sinister deal made with infernal creatures.
- Wizards are arcane spellcasters who study magic to unlock its powerful secrets.

- Stealth: This represents your ability to escape detection while moving or taking large-scale actions.
- Survival: This represents your ability to take care of yourself and others in the wilderness, including the ability to follow tracks.
- Swim: This represents your ability to swim.

Skills

Skills represent the myriad of talents that people can have, such as cooking or swimming. Each character is trained in a certain number of skills from their class and Intelligence. The twenty-six skills are summarized below.

- Awareness: This represents your ability to observe things which you might otherwise fail to notice.
- Balance: This represents your ability to maintain your balance and poise in difficult circumstances.
- Climb: This represents your ability to climb obstacles.
- Craft: This represents your ability to construct objects from raw materials.
- Creature Handling: This represents your ability to influence non-sapient creatures.
- Deception: This represents your ability to lie or otherwise mislead people without being caught.
- Deduction: This represents your ability to make logical deductions based on evidence.
- Devices: This represents your ability to manipulate mechanical devices such as locks, traps, and other contraptions.
- Disguise: This represents your ability to create disguises to conceal the appearance of creatures or objects.
- Endurance: This represents your ability to persevere through physical trials.
- Flexibility: This represents your ability to escape bindings and move through small areas by contorting your body.
- Intimidate: This represents your ability to intimidate and coerce people into doing what you want.
- Jump: This represents your ability to jump.
- Knowledge: This represents your understanding of particular aspects of the world.
- Medicine: This represents your practical understanding of how to tend to the wounds of living creatures.
- Perform: This represents your ability to create particular forms of entertainment.
- Persuasion: This represents your ability to convince people to think what you want them to.
- Profession: This represents your practical understanding of a particular profession.
- Ride: This represents your ability to ride and control horses and other mounts.
- Sleight of Hand: This represents your ability to pick pockets, palm objects, and perform other feats of legerdemain.
- Social Insight: This represents your ability to read body language and emotion.

Chapter 4

Combat

The world of Rise can be a harsh one, and not all disagreements can be resolved peacefully. At some point, you will be forced to enter combat. This chapter explains how combat works in Rise. The combat rules also generally cover situations where time and precise positioning are important, even if they do not involve violence.

Attacking and Defending

When you use an offensive ability, you will have to make an attack. To make an attack, roll 1d10 and add your [accuracy](#) with the attack. That should be written on your character sheet in the attack's description. If you get a 10, keep rolling until you don't, then sum all of the rolls.

Your attack result is compared to your target's relevant defense. There are four defenses: Armor, Fortitude, Reflex, and Mental. Each attack specifies what defense the target uses to avoid the attack.

There are four possible outcomes for an attack: a critical hit, a regular hit, a glancing blow, and a miss.

- Critical hit: Your attack result is at least 10 higher than the

target's defense. A critical hit deals double damage, and may have other special effects.

- Hit: Your attack result meets or exceeds the target's defense. The ability has its normal effect.
- Glancing blow: Your attack result was too low, but only by 1 or 2. The ability deals half damage, and doesn't have any special effects other than damage.
- Miss: Your attack was too low by 3 or more. The ability has no effect unless it specifically says it does.

This process works in the same way when enemies attack you. The GM may ask you what your defenses are when attacking you.

Dealing and Taking Damage

If you hit with a damaging attack, you roll the damage dice for that attack, sum them all together, and tell the GM the result. Many abilities also add a flat amount to the damage result. The GM will track that damage and tell you what effect it had.

Taking damage is more complicated. When you take damage, the damage first reduces your [damage resistance](#). Any damage in excess of your remaining damage resistance causes you to lose that many [hit points](#). Hit points and damage resistance function in the same way, but damage resistance can protect you from debilitating attacks that only work if they make you lose hit points. If you are dealt damage that reduces your hit points below 0, you gain one or more [vital wounds](#).

While you have vital wounds, you suffer penalties based on the wound. If you get more than one vital wound, you can die. The GM can explain how vital wounds work in more detail if it comes up. Vital wounds can only be removed with an 8 hour rest, or with some rare abilities which you probably won't have access to.

Tracking Time in Combat

Combat takes place in a series of [rounds](#), which represent about six seconds of time. Each round of a combat is divided into two [phases](#): the movement phase and the action phase (see Phases, page ??). After both phases are complete, the round ends and the next round begins.

During the movement phase, everyone will move, but can't attack. During the action phase, everyone will take a [standard action](#) of their choice. This could be an attack, an additional movement, or

another special ability.

You and your fellow player characters will take turns during each phase, but you can act in any order. The GM might ask each player in turn what they plan to do, or players could decide for themselves what they want to do and tell the GM whenever they have decided. It depends how the GM wants to run the game.

While your characters take actions, your enemies will also take their own actions. Their actions resolve simultaneously with your actions. The GM will typically tell you what your enemies did after all of the players have finished their actions.

Action Types

Most abilities require a **standard action** to use. You can take one standard action during each action phase.

Some less common abilities require a **minor action**. You can take one minor action during each action phase in addition to your standard action.

There are also **free actions**, which aren't generally used for specific player abilities. You can take any number of free actions during both the movement and action phase.

Movement

During the movement phase, your character move up to their speed along the ground. Most characters have a movement speed of 30 feet, but your character sheet will tell you your speed. You tell the GM which location you want to move to, or which creature you want to move next to. If you move during the action phase, you can sprint, which doubles your movement speed. Enemies will still get a chance to attack you from your original position even if you move during the action phase, so you can't dodge attacks that way.

You might be playing with a gridded battlemat with figures for each character, or you might be just imagining the world. Movement on a grid or hex map is typically more precise and tactical, while purely mental scenes tend to be more loose about exact distances and positioning. As usual, talk to your GM about what you each want from the game.

Universal Combat Abilities

Your character sheet will have some abilities unique to your character written on it. In addition, there are a variety of things that every character can do in the world. These won't generally be written on your sheet explicitly because they are the same for everyone. However, it can be useful to know that they exist. If you find yourself using one of these abilities often, consider adding it to your character sheet.

- **Charge:** Move and make a strike with a weapon, but suffer a brief -2 penalty to defenses afterwards.
- **Desperate Exertion:** Reroll any attack or check with a +2 bonus, but you gain two **fatigue levels**.
- **Escape Grapple:** Stop being grappled.
- **Grapple:** Start grappling with a foe.

- **Maintain Grapple:** Continue grappling with a foe as a **free action**.
- **Overrun:** Move through spaces occupied by enemies. Costs one fatigue during the movement phase, but is free during the action phase.
- **Recover:** Regain half your hit points, all your damage resistance, and remove all conditions. However, you gain two fatigue levels, and you can only do it once per fight.
- **Shove:** Push a foe up to half your speed.
- **Sprint:** Move at double speed. Costs one fatigue during the movement phase, but is free during the action phase.
- **Total Defense:** Gain a +2 bonus to all defenses this round.
- **Throw:** Throw something you're holding.
- **Trip:** Knock a foe **prone** (*half speed, -2 Armor and Ref*).

Using Abilities

Ability Descriptions

Abilities are typically written in the following form:

Ability Name	Ability Tags (if any)
Usage time: Usually a standard action	
This section will explain who or what the ability affects, and how those targets are affected. Many abilities cause you to make an attack.	
Hit: This describes the effect that the ability has against a target that you successfully hit with it.	
Critical hit: If the ability has a special effect on a critical hit , that effect is described here.	
Miss: Some abilities still deal half damage even when they miss.	

Magical and Mundane Abilities

Every ability is either **magical** ✨ or **mundane**. Magical abilities use Willpower to determine their **power**, while mundane abilities use Strength. If an ability has a ✨ next to its name, it is magical. Otherwise, it is mundane.

Ability Range

Many abilities only work within a particular distance from you. This maximum distance is called the ability's **range**. There are five common ranges: Short (*30 ft.*) range, Medium (*60 ft.*) range, Long (*90 ft.*) range, Distant (*120 ft.*) range, and Extreme (*180 ft.*) range.

Line of Sight

You have **line of sight** to something if you can see it. Glass does not block line of sight, but darkness and fog can.

Line of Effect

You have **line of effect** to something if you could touch it with a really long pole. Glass blocks line of effect, but darkness and fog do not.

Targeted Abilities

If an ability affects a specific number of creatures or objects, it is called a **targeted** ability. Targeted abilities require you to have **line of sight** and **line of effect** to all targets. Every targeted ability has a **range**.

Area Abilities

If an ability affects everything of a certain type within an area, it is called an area ability.

Area Types

There are three common area types. If an area's type is not mentioned, it is a burst.

- **Burst:** Has an immediate effect and then ends.
- **Emanation:** Has a duration based on a specific creature or object. If the source of the area moves, the area's effect moves with it.
- **Zone:** Has a duration based on a location. Some zones can be moved after being created, but that movement is not tied to a specific creature or object.

Measuring Areas

Areas are always measured from a **point of origin**, which must be a grid intersection. An area's size defines the extent to which it extends out from its point of origin, whether as a radius or as a length. All four of a square's corners must be within an area for that square to be in the area.

When using an area ability, you must have **line of sight** and **line of effect** to its point of origin. The ability's **range** measures the maximum distance to its point of origin. If it does not have a range, its point of origin must touch your space.

There are six common area sizes: Tiny (*5 ft.*), Small (*15 ft.*), Medium (*30 ft.*), Large (*60 ft.*), Huge (*90 ft.*), and Gargantuan (*120 ft.*).

There are five common area shapes. If an area's shape is not mentioned, it is a sphere.

- **Cone:** A 90 degree arc, measured by length. A cone's height is normally 5 feet.
- **Cylinder:** A circle with a height, measured by radius. A cylinder's height is normally equal to its radius.
- **Line:** A straight line, measured by length. A line is normally 5 feet wide and 5 feet high.
- **Sphere:** A sphere, measured by radius.
- **Wall:** A straight line, measured by length. A wall's height is normally equal to half its length, and its width is essentially zero. A wall is always a **zone**, not a **burst** or an **emanation**.

Dismissal

When an ability is **dismissed**, all of its lingering effects immediately end. Unless otherwise noted, all **magical** ✨ abilities with a duration can be dismissed, but **mundane** abilities cannot be dismissed. You can dismiss abilities as a **free action** that requires only mental effort.

Chapter 5

Items and Equipment

Items are divided into five broad categories:

- Weapons are typically used to make [strikes](#). Weapons come in many forms, and can have very different uses in combat.
- Armor is worn or wielded to protect yourself. There are two types of armor: body armor and shields.
- Apparel items are worn on the body, but unlike armor they have no intrinsic defensive properties. Rings, cloaks, and all manner of other worn items are considered apparel. The only mechanically significant apparel items are [magical](#) ✨.
- Implements are typically held while casting spells or using other magical abilities. The only mechanically significant implements are [magical](#) ✨.
- Tools are used to achieve an effect instead of worn on the body. Potions, traps, and magic bags are all tools.

Wealth and Item Ranks

The worth of an item can be measured with money, or with the more abstract concept of an item's rank. Money is typically measured with gold pieces, or gp. An item with a given rank is typically worth a certain number of gold pieces, as shown in the table below. Consumable items are worth a fifth as much as a permanent item of the same rank.

Rank	Power	Typical Item Price	Permanent Typical Price	Consumable Typical Price
0	0	10 gp or less	2 gp or less	
1	2	40 gp	10 gp	
2	4	200 gp	40 gp	
3	6	1,000 gp	200 gp	
4	8	5,000 gp	1,000 gp	
5	10	25,000 gp	5,000 gp	
6	12	125,000 gp	25,000 gp	
7	14	625,000 gp	125,000 gp	

Weapons

Weapons are used to make [strikes](#) in combat. Your class determines which weapons you are proficient with.

Each weapon deals a specific amount of damage if you hit with it. Weapons can also have other special properties to change how you use them. For example, many weapons grant a small accuracy bonus, and some weapons are ranged or can be used to attack

multiple creatures at the same time. There are too many unique weapons to even summarize them here. Your character sheet should indicate what weapons you have, and how they modify your attacks.

Armor

Armor protects you from incoming attacks. Body armor has two main effects: it increases your Armor defense, and it increases your [damage resistance](#). Shields only increase your armor defense, and they require a hand to use. Your class determines which armor you are proficient with.

There are three main types of armor.

- Light: Not very protective, but has few penalties. Typically useful for characters with a high Dexterity, since they can dodge more easily while wearing it.
- Medium: Reasonable for most characters to use, with a good balance of defensive benefits and encumbrance penalties.
- Heavy: Extremely protective, but heavy body armor reduces your speed by 10 feet. Proficiency with heavy armor is relatively rare.

Magic Items

There are a vast array of magical items that exist in Rise. If you find a magic item, the GM should explain what it can do, assuming that you can identify it. In order to use magic equipment, you have to [attune](#) to it, which costs one of your [attunement points](#). Magic tools, like permanently glowing rocks or bags of holding, don't require attunement.

Other Items

There are many other items that you might find or use on your journey. Rise doesn't define specific rules for many regular items that exist in the world, like backpacks or ropes. Talk to your GM about what makes sense for you to have in your game.

Chapter 6

The World

Rise does not attempt to define a single geography with specific countries and locations that is shared between all games. It is common for GMs to define their own setting when running a game, and that freedom is important. However, the universe of Rise does differ in a number of important ways from the real world. The fundamental assumptions that Rise makes about the its fantasy world are:

- Magic is commonly known but rarely understood
- Some people are vastly more powerful than others
- Souls, deities, and the afterlife are real

These core elements are ambiguous about some details, and GMs are encouraged to fill in those details as they see fit. Of course, a GM has absolute power, and can create a world that changes any number of these assumptions. However, doing so can significantly change the tone of the game and create logical inconsistencies, so it should be done carefully.

Magic

The world of Rise is a magical place. Many people are capable of using magic to perform feats that would be impossible in the real world. Not everyone is capable of magic, of course. It's reasonable to assume that about ten percent of the civilized people in the world have a magical ability of some kind. In some societies, such as a feudal human-dominated society with a large number of commoners and serfs, the percentage of people with magic can be lower. However, this is balanced by the existence of other societies that tend to be more magical, such as societies ruled by gnomes and elves. Even in low-magic societies, everyone knows that magic exists, and almost everyone has observed or been personally affected by magic at some point in their lives.

People can have magical abilities for a wide variety of reasons. There are three main categories to explain why people can access magic: intrinsic magic, learned magic, and gifted magic. Each class with magical abilities belongs to one of these groups. Characters with magical feats are free to choose any of those three explanations for their feats. The explanation does not have to be the same as for any other magical abilities they possess. For example, a cleric may be gifted their magical cleric abilities because they worship a particular deity, but they may also be naturally telepathic.

Some people are simply intrinsically magical. They may require training and experience to improve their natural magical talents,

but they had magical capabilities before doing any training. This intrinsic magic can come from magical ancestry, unusual birth circumstances, magical experimentation, exposure to powerful magic, simple random chance, or any number of other sources. This is the standard explanation for sorcerers. In addition, this is the most common explanation for the magical abilities of monsters.

Some people gain access to magic through personal training or research. These people find ways to tap into some pre-existing magical property of the universe and manipulate it at their command. This is the standard explanation for monks, rangers with the Beastmaster archetype, rogues with the Bardic Music archetype, and wizards.

Some people are gifted magic by their association with powerful magical entities or forces. They offer worship, allegiance, or their souls, and are granted magical power in exchange. This is the standard explanation for clerics, druids, paladins, and warlocks.

Personal Power

The median person in the world of Rise is not particularly more or less capable than the median person in the real world. Training can help people improve their skills, but as in the real world, anyone who tries to improve themselves through training and practice eventually reaches an upper limit to their potential. However, unlike in the real world, people in Rise can reach beyond their ordinary limitations. By defeating powerful foes and performing great deeds that influence the world around them, people can gain levels, which allows them to reach new heights of power. At high levels, people can perform clearly superhuman feats that would be impossible for ordinary humans, even without the influence of magic.

People in Rise wouldn't usually talk about "levels" as a discrete concept ranging from 1 to 21. They would perceive the world as a spectrum, and the specific divisions would be more subtle. However, they would be aware that some people are fundamentally stronger and more skilled than others. Individual scholars or scholastic groups may create their own concepts in-universe to categorize and explain the phenomenon of levels, since the growth of personal power over time is observable and studiable. However, those in-universe concepts would never exactly replicate the metagame concept of a level.

It is common for people in positions of political power to also wield unusually large amounts of personal power. High level individuals can be savvier, wiser, and more persuasive than any ordinary human. They are more likely than low-level individuals to be able to gain political power through whatever means they see fit, and more likely to maintain their hold on that power. In addition, political power can grant further opportunities for performing great deeds, which helps those in power to gain levels and stay ahead of any competition.

The fastest path to acquiring personal power does not come from pursuing political power. It comes from adventuring. Adventurers can defeat powerful monsters, help towns in need, and otherwise have a significant personal influence on the world. In the process of these adventures, they can amass personal power much more rapidly than ordinary people. Of course, adventuring also has an unusually high risk of death. Even worse, people who die while adventuring often leave their corpse in the middle of nowhere - in a monster's stomach - which prevents them from being resurrected without incredibly rare magic. Adventurers must constantly seek out new challenges to test their limits, or else they will stagnate and stop acquiring personal power, so it is never a sustainable long-term activity. There are many people in the world who were adventurers at some point in their past, and everyone is familiar with the concept, but active adventurers are still unusual.

Deities and Afterlives

When a humanoid creature dies in Rise, they know beyond a shadow of a doubt that they will go to an afterlife. Most likely, they know exactly which afterlife they will go to, either as a result of their alignment or their worship of a particular deity. In that afterlife, they will live again for as long as they want, though they cannot leave without being magically resurrected. People are confident that this is true because deities have told them so, and deities are provably real. Also, rare and powerful magic can be used to communicate with people in their afterlife, or even to physically travel to an afterlife plane.

It is an undisputed fact that Rise is filled with a wide variety of deities of varying power and influence. They divinely empower their clerics to act on their behalf. Many people know, though some chain of connections, someone who chose to become a cleric and was quickly rewarded with divine magic far beyond anything they could previously do on their own. Everyone has heard legends of deities intervening more directly in the world even without a cleric, though these stories are rare and few have experienced them firsthand.

There are nine distinct afterlife planes, with one plane for each alignment combination. Each of those planes is divided into layers. Some of those layers are reserved for deities, with major deities claiming layers that are entirely their own and multiple minor deities sharing territory within a single layer. The remaining layers have no specific associated deity. People can travel between the layers, though the specific mechanisms for traversing layers are different for each afterlife plane. Most people do not know this level of detail about afterlife planes, and a commoner would simply be confident that they will go where they belong.

It is well known that the afterlife planes for evildoers are much harsher than the other afterlife planes. The three evil afterlife planes are collectively referred to the Abyss. Demons stalk those planes, tormenting evildoers for their own sadistic reasons. One of the reasons that some people worship evil deities is to gain a promise of safety, since evil deities protect their worshippers from demonic torment in the afterlife. It is also said that demons only torment the weak-willed, and that those who escape demonic torments are free to live in hedonistic luxury. There is truth in this, though there are far more people who are confident that they would rule proudly in the Abyss than people who succeed.

A list of specific well-known deities is given in Table 6.1: Deities. The many minor deities worshipped by monsters are not listed here. Of course, the GM may use their own custom pantheon.

Table 6.1: Deities

Appendix A

Glossary

ability: An ability is a generic term for any unusual property a creature has or any special actions it can take to cause particular effects. Spells, racial traits, and the benefits from class [archetypes](#) can all be called abilities.

ability tag: An ability tag describes the effects of an ability. For details, see Ability Tags, page ??.

accuracy: The bonus added to an [attack roll](#). For details, see Accuracy, page ??.

action phase: The action phase is the second of two [phases](#) in a combat [round](#). During the action phase, creatures can [attack](#), cast [spells](#), and take other major combat actions.

alchemical item: An alchemical item is any item created using the Craft (alchemy) skill. This includes firebombs, potions, and many other items.

attunement point: Attunement points allow you to [attune](#) to effects such as spells or items. For details, see Attunement Points, page ??, and Attuned Abilities, page ??.

alignment: Your alignment represents your general morality in broad terms. For details, see Alignment, page ??.

ally: Some beneficial abilities affect allies. An ally is any creature you consider an ally who also considers you an ally, not including yourself. For details, see Allies and Enemies, page ??.

archetype: An archetype is a collection of related abilities from a particular class. Each class has five archetypes. For details, see Archetypes, page ??.

archetype rank: Each ability from an [archetype](#) has a minimum rank required to gain the ability. For details, see Archetype Ranks, page ??.

area: Many abilities affect a broad area. There are five standard area sizes: Small (15 ft.), Medium (30 ft.), Large (60 ft.), Huge (90 ft.), and Gargantuan (120 ft.). For details, see Area, page ??.

armor: Armor is a form of equipment that protects your body from harm. There are two kinds of armor: [body armor](#), which you wear on your body, and [shields](#), which you wield in a hand. For details, see Armor, page ??.

astral beacon: An area with an astral beacon is easier to [teleport](#) to using long-distance teleportation abilities. For details, see Astral Beacons, page ??.

attack: Anything that affects another creature in a potentially harmful way, such as striking a creature with a sword, is an attack. All attacks require making an [attack roll](#). If an ability requires an

attack roll, it is considered to be an attack, even if you use them in a way that you believe is not harmful.

attack result: An attack result is the total you get on an [attack roll](#), after taking to account any bonuses or penalties that apply to the roll.

attack roll: A roll required to succeed with an attack. To make an attack roll, roll 1d10 + your [accuracy](#) with the attack. If the result of the attack roll equals or exceeds the target's [defense](#), the attack succeeds. Some attacks, especially magical attacks, have effects even if the attack roll fails. For details, see Attack Rolls, page ??.

attended: An attended item is an item currently being held or carried by a creature. Some abilities can only affect [unattended](#) items.

attribute: A core representation of a character's capacity in a wide range of areas. There are six attributes: [Strength](#), [Dexterity](#), [Constitution](#), [Intelligence](#), [Perception](#), and [Willpower](#).

attune: Some abilities last as long as you attune to them. Attuning to an ability costs an [attunement point](#) that you cannot recover as long as you maintain your attunement to that ability. For details, see Attunement, page ??.

attuned: If you are attuned to an ability, you have invested an [attunement point](#) in it to maintain its effect. For details, see Attunement, page ??.

barding: Armor designed for non-humanoid creatures is called barding. The Armor defense bonus provided by barding is 2 lower than normal. For details, see Barding, page ??.

base class: Your base [class](#) grants you a variety of benefits. You always have a single base class, even if you are a multiclass character. For details, see Base Class, page ??.

base speed: Each size category has a base speed that indicates how far creatures of that size category can generally move. For details, see Base Speed, page ??.

briefly: An effect that lasts briefly, or a brief effect, lasts until after the end of the next round after the effect was applied.

bright illumination: In an area with bright illumination, creatures can see clearly. Any effect which creates bright illumination in an area also creates enough light for [shadowy illumination](#) in twice that area. For details, see Vision and Light, page ??.

brilliant illumination: In an area with brilliant illumination, creatures can see clearly. No shadows exist within an area of bril-

luminant illumination. Any effect which creates brilliant illumination in an area also creates enough light for **shadowy illumination** in twice that area. For details, see Vision and Light, page ??.

body armor: Body armor is a form of **armor** that you wear on your body. For details, see Armor, page ??.

broken: A broken object is damaged and unsuitable for use, though it retains its general structure and can be repaired. For details, see Broken Objects, page ??.

burst: A burst is a type of area that an ability can have (see Area Types, page ??). A burst ability has an immediate effect on all valid targets within an area.

cantrip: Some **mystic spheres** have minor spells called cantrips. Anyone who has access to a mystic sphere knows all cantrips from that sphere. For details, see Cantrips, page ??.

carrying capacity: Your carrying capacity defines the amount of weight you can carry without penalty. For details, see Weight Limits, page ??.

character level: Your character level is your total level, including levels from all of your classes. Whenever text refers to your “level”, without specifying a particular kind of level, it means your character level.

chain: An ability can specify that it chains a certain number of times. For each time that the ability chains, you may choose an additional secondary target for the ability. You can’t chain back to a creature or object that is already a target of the ability. Each additional target must be within 15 feet of the previous target in the chain. The chain starts from one of the ability’s primary targets. These additional targets must have **line of sight** to you and **line of effect** to the previous target in the chain. However, they do not need **line of effect** to you, and they can be beyond the ability’s original range.

Unless otherwise noted in a spell’s description, the secondary targets from chaining are affected by the ability in the exact same way as the primary target. Both creatures and objects are valid targets for chaining, but they have to be reasonably sized. You can’t chain off of the ground.

check: A check is a d10 roll required to accomplish an action that has a chance of failure that is not an attack. If the result of your roll, including your modifier, is high enough, you succeed. Otherwise, you fail. For details, see Checks, page 8.

class: Your class represents your fundamental source of power and the type of abilities you have. For example, barbarians draw power from the primal energy found deep within all living things, while clerics draw power from their worship of mighty deities. For details, see Classes, page ??.

class skill: Each **class** has an associated set of skills that members of that class often know. These are called class skills. Your **base class** automatically grants you training with a specific number of skills from among your class skills. For details, see Skills, page ??.

climb speed: A creature with a climb speed can climb as easily as a human walks on land. The effects of a climb speed are described at Climb Speed, page ??.

close range: Weapons have two **range limits**: close range and

long range. Attacks within a weapon’s close range have no penalty. For details, see Weapon Range Limits, page ??.

combat style: A combat style is a collection of **maneuvers** that some classes gain access to. For details, see Combat Styles, page ??.

common language: Common languages are languages that are widely spoken. They are described in Table ??: Common Languages, page ??.

concealment: Concealment represents effects which make a target harder to see, such as shadowy lighting. All **targeted** attacks against a creature or object with concealment from you have a 20% **miss chance**. For details, see Concealment, page ??.

condition: A condition is an effect that lasts on a creature until it is removed by effects that remove conditions. All conditions are detrimental, and most are standard **debuffs**. Player characters can remove conditions with the **recover** ability or by taking a **short rest**, as well as with various special abilities (see Recover, page ??). For details, see Ability Durations, page ??.

Constitution: Constitution is an **attribute** that measures your health and stamina. For details, see Constitution, page ??.

cover: Cover represents any obstacle that physically prevents you from striking your target, such as a tree or intervening creature. For details, see Cover, page ??.

critical hit: When you make an attack, if your result beat the target’s defense by 10 or more, you get a critical hit. Unless otherwise noted, damaging attacks roll twice as many damage dice on a critical hit. For details, see Critical Hits, page ??.

critical success: When you make a check, if your result beat the **difficulty value** by 10 or more, you get a critical success. Some abilities have special effects on critical successes.

damage: Many attacks deal damage to you when they hit. For details, see Taking Damage, page ??.

damage resistance: Whenever you take damage, you first apply that damage to your damage resistance applying it to your **hit points**. For details, see Damage Resistance, page ??.

damaging hit: Some abilities have special effects if they get a damaging hit. If you miss, glance, or hit but fail to deal damage, you do not get a damaging hit.

darkvision: A creature with darkvision can see perfectly in complete darkness. For details, see Darkvision, page ??.

dead: A dead creature’s soul leaves its body. Dead creatures cannot benefit from normal or magical healing, but they can be restored to life via magic (see Resurrecting the Dead, page ??). A dead body decays normally unless magically preserved.

debuff: A debuff is a negative effect on a creature. Many debuffs are applied as **conditions**, but some last for longer or shorter times. For a list of debuffs, see Circumstances and Debuffs, page ??.

deep attunement: Deep attunement abilities are **Attune** abilities with two additional restrictions. First, they cost extra **attunement point** to **attune** to. Second, you can’t get back those attunement points until you take a **short rest**, even if you release the attunement. For details, see Deep Attunement, page ??.

defeat: You defeat a creature if you personally cause it to become **defeated**. Abilities that trigger when you defeat a creature

generally activate if you deal damage to it in a phase when it dies or is knocked unconscious. This often means multiple creatures are considered to have defeated the same enemy. For narrative purposes, you can choose to give credit to the creature who dealt the most damage in the last phase, but you shouldn't use that method for determining whether creatures gain the benefit of effects like an *onslaught* weapon.

defeated: A creature is defeated if it dies, surrenders or is incapacitated for an extended period of time (such as by being knocked unconscious). Some abilities, such as a ranger's *quarry* ability (see Quarry, page ??), last until their target is defeated. If there is ambiguity about whether a surrendering or seemingly incapacitated enemy still poses a threat, you choose whether you consider the enemy to be defeated.

defense: A defense is a static number which represents how difficult you are to affect with attacks. There are four defenses: Armor, Fortitude, Reflex, and Mental. For details, see Defenses, page ??.

destroyed: A destroyed object has been damaged to the point where it is completely beyond repair. For details, see Destroyed Objects, page ??.

Dexterity: Dexterity is an [attribute](#) that measures your hand-eye coordination, agility, and reflexes. For details, see Dexterity, page ??.

dice increment: A die increment is a single increase or decrease in the value of a dice pool. For example, a 1d8 that is increased by one die increment becomes a 1d10 die. Similarly, a 2d6 dice pool that is decreased by one die increment also becomes a 1d10 die. For details, see Dice Pools, page ??.

dice pool: A dice pool is a collection of dice that are all rolled together and summed to find a result. For details, see Dice Pools, page ??.

difficult terrain: Difficult terrain costs an additional 5 feet of movement to move out of. For details, see Difficult Terrain, page ??.

difficulty value: The difficulty value of a [check](#) is the check result required to succeed. It can be abbreviated as "DV". In general, attacks are rolled to beat [defenses](#), and checks are rolled to beat a given difficulty value.

dirty trick: You can use the *dirty trick* ability to impair a foe by using your environment. For details, see Dirty Trick, page ??.

disease: An affliction of the body, causing a steady deterioration over time.

dismiss: When you dismiss an ability, it ends, and all of its lingering effects are removed. Unless otherwise noted, all [magical](#) ✨ abilities with a duration can be dismissed, but [mundane](#) abilities cannot be dismissed. This includes [conditions](#), [brief](#) effects, and other abilities with more specific durations. You can dismiss abilities as a [free action](#) (see Dismissal, page 15).

dual strike: A dual strike is a [strike](#) made with two weapons at once. Each weapon makes a separate attack, and deals damage independently. For details, see Dual Strikes, page ??.

elite: Elite monsters are much more dangerous than standard

monsters. For details, see Elite Monsters, page ??.

elite action: Elite monsters can take a special extra action every round called an elite action. Every elite monster has at least one special ability which requires an elite action to use. For details, see Elite Monsters, page ??.

emanation: An emanation is a type of area that an ability can have (see Area Types, page ??). An emanation ability has effects within an area for the duration of the ability. It emanates from a specific creature or object, rather than a location. If that creature or object moves, the emanation moves with it.

encumbrance: Your encumbrance is a value that represents how much you are burdened by armor and weight. For details, see Encumbrance, page ??.

enemy: Some harmful abilities affect enemies. An enemy is any creature you consider to be an enemy. For details, see Allies and Enemies, page ??.

enhancement bonus: Some abilities provide an enhancement bonus instead of a regular bonus. Enhancement bonuses function like normal bonuses except that they do not stack with each other, even if the enhancement bonuses come from different sources. For details, see Stacking Rules, page ??.

environmental damage: Environmental damage is a type of damage. Environmental damage does not reduce the [damage resistance](#) of creatures or objects, making small amounts of environmental damage irrelevant to healthy creatures. For details, see Environmental Damage, page ??.

exotic weapon: A rare few weapons are considered exotic weapons. They are unusually difficult to wield, and even being [proficient](#) with the associated [weapon group](#) does not grant you the ability to use an exotic weapon. Some class abilities grant proficiency with exotic weapons.

explode: When you roll a 10 on an [attack roll](#), the die can explode. If it does, you roll it again and add the two results together to determine the total. For details, see Exploding Attacks, page ??.

explosion target: The number you need to roll on a die to explode is called your explosion target (see Exploding Attacks, page ??). Normally, your explosion target is 10. Unless otherwise noted, all effects which reduce your explosion target do not affect bonus dice rolled for exploding attacks.

extra damage: Some attacks deal extra damage. This damage is added on top of the normal damage from that attack. For details, see Extra Damage, page ??.

failure chance: If you have a failure chance with an [attack](#), you have a random chance to miss with the attack regardless of the result of your attack roll. If you have multiple failure chances, only the highest one applies. Failure chances are rolled independently from [miss chances](#), and they are not affected by abilities that mitigate miss chances. They are less common than a miss chance, and reflect circumstances that no amount of skill can mitigate.

falling damage: If you fall at least 10 feet, you and the object you land on take damage. This damage is called falling damage. A creature with a Medium [weight category](#) takes 1d8 falling damage per 10 feet, to a maximum of 30d8. For details, see Falling Damage,

page ??.

fatigue level: Your fatigue level measures how fatigued you are. You take a [fatigue penalty](#) if your fatigue level exceeds your [fatigue tolerance](#). For details, see [Fatigue](#), page ??.

fatigue penalty: You take a penalty to [accuracy](#) and [checks](#) equal to your [fatigue level](#) – your [fatigue tolerance](#). If you have a fatigue penalty of at least –1, you are considered [fatigued](#). When your fatigue penalty reaches –5, you fall [unconscious](#) until your fatigue penalty is reduced below –5. For details, see [Fatigue Penalty](#), page ??.

fatigue tolerance: Your fatigue tolerance measures the maximum [fatigue level](#) you can reach before you suffer a [fatigue penalty](#). For details, see [Fatigue Tolerance](#), page ??.

fly speed: A creature with a fly speed has the ability to fly through the air. Its speed is the distance it covers in a single [movement](#). Most creatures suffer a –4 penalty to their [Armor](#) and [Reflex](#) defenses while flying. For details, see [Aerial Movement](#), page ??.

forced movement: A forced movement ability can cause a creature to move unwillingly. There are two types of forced movement: [knockback](#) and [push](#). Although [teleportation](#) can cause a creature's location to change unwillingly, it is not considered a type of forced movement.

free action: Each round, you take can any number of free actions. Free actions can be taken in any phase. For details, see [Free Actions](#), page ??.

free hand: A free hand is a hand or similarly dexterous appendage that is not currently being used for any purpose. Many abilities require a free hand to use. You cannot use the same hand for two different purposes in the same [phase](#).

glance: When a creature glances another creature with an attack, it means that the attacker scored a [glancing blow](#).

glancing blow: When you miss on any attack by 2 or less, it is called a glancing blow. Whenever you get a glancing blow with a damaging attack, you deal half damage. For details, see [Glancing Blows](#), page ??.

glide speed: A creature with a glide speed can glide through the air. It cannot fly upwards, but it can travel forward while it descends, and it descends at a significantly reduced rate. Most creatures suffer a –4 penalty to their [Armor](#) and [Reflex](#) defenses while gliding. For details, see [Gliding](#), page ??.

grounded: A grounded creature or object is standing on or otherwise supported by a stable surface that can support its weight. The surface must be at least as large as the creature or object resting on it. Some effects only work if the creature or object is grounded by a particular material, such as stone.

heavy undergrowth: A space overrun with thick bushes, vines, and similar natural obstacles has heavy undergrowth. Heavy undergrowth provides [concealment](#) and is considered [difficult terrain](#).

heavyweight: A heavyweight object has a [weight category](#) that is one category larger than the object's [size category](#). For details, see [Weight Categories](#), page ??.

height limit: Some abilities have a height limit. A height limit defines your maximum distance directly above an object at least

two size categories larger than you that is free-standing and capable of supporting your weight. This is common for flying creatures (see [Flight](#), page ??).

hit point: Your hit points measure how hard you are to seriously injure or kill. You lose hit points when you take damage. If you run out of hit points, you gain [vital wounds](#) when you take damage instead, which can cause you to die quickly. For details, see [Hit Points](#), page ??.

icy terrain: Icy terrain is covered in ice, making it hard to traverse. For details, see [Cryomancy](#), page ??.

immune: A creature that is immune to a particular effect treats that effect as if it did not exist. An immune creature cannot gain [conditions](#) or similar effects like [poison](#) if it is immune to them, or if the only effect of that condition would be to apply a specific debuff that it is immune to. In addition, a creature that temporarily becomes immune to an effect immediately removes all instances of that effect. For example, a creature that suddenly becomes immune to poison would remove all poisons currently affecting it, and those poisons would not return once the immunity ends.

improvised weapon: An improvised weapon is an object which could conceivably be used as a weapon, but which was not designed for that purpose. Common examples include doors and wine bottles. For details, see [Improvised Weapons](#), page ??.

initiative: When multiple creatures take mutually impossible actions simultaneously, such as racing to be the first one to a door, they must roll initiative checks to determine who completes the action first. Your initiative modifier is equal to your [Dexterity](#). For details, see [Conflicting Actions](#), page ??.

insight point: Insight points can be spent to gain additional abilities or proficiencies. For details, see [Insight Points](#), page ??.

Intelligence: Intelligence is an [attribute](#) that represents how well you learn and reason. For details, see [Intelligence](#), page ??.

item rank: Items have ranks indicating their approximate value and rarity. For details, see [Item Ranks](#), page ??.

loose equipment: Loose equipment is much more vulnerable to damage than ordinary equipment. For details, see [Loose Equipment](#), page ??.

key attribute: The key attribute for a skill is the attribute associated with that skill. For example, [Climb](#) is a [Strength](#)-based skill. Some skills, such as [Persuasion](#), do not have a key attribute.

knockback: Knockback is a type of [forced movement](#). It represents being thrown backwards by a single large impact. If a creature or object being knocked back encounters an obstacle, it and the obstacle each take 1d6 damage per 10 feet of movement remaining, up to a maximum of 20d6 damage. A knockback movement is always a single straight line.

land speed: A creature's land speed is a [movement mode](#) that determines how fast it can walk on land (see [Movement Modes](#), page ??). Bipedal creatures have a land speed equal to the base speed for their size (see [Size Categories](#), page ??). Creatures with four or more legs have a land speed 10 feet faster than the base speed for their size.

legacy item: A legacy item is an item magically bonded to its bearer. As its bearer gains levels, it increases in power as well. For

details, see Legacy Items, page ??.

light undergrowth: A space with passable bushes, vines, and similar natural obstacles has light [undergrowth](#). Light undergrowth provides [concealment](#).

lightweight: A lightweight object has a [weight category](#) that is one category smaller than the object's [size category](#). For details, see Weight Limits, page ??.

line: A line is an area shape that an ability can have (see Area Shapes, page ??). A line-shaped area has a given length, width, and height. Unless otherwise stated, a line's height is equal to its width.

line of effect: You cannot target something that you do not have line of effect to. Line of effect is blocked by solid obstacles, even invisible ones. For details, see Line of Effect, page ??.

line of sight: You cannot target something that you do not have line of sight to. Line of sight is blocked by any obstacle that blocks sight, even if that obstacle does not block physical passage. For details, see Line of Sight, page ??.

long range: Ranged weapons have two [range limits](#): [close range](#) and long range. Attacks beyond a weapon's [close range](#), but within its long range, have a -4 [longshot penalty](#). For details, see Weapon Range Limits, page ??.

long rest: A long rest represents eight hours of relaxation or sleep. It allows you to remove all of your [fatigue levels](#) and make progress towards healing a [vital wound](#). For details, see Long Rest, page ??.

longshot penalty: A longshot penalty is the penalty that you take for attacking outside of a weapon's [close range](#). It is normally a -4 [accuracy](#) penalty. For details, see Weapon Range Limits, page ??.

magic source: A magic source defines where a creature's [mystic spheres](#) come from. There are four magic sources: arcane, divine, nature, and pact. Sorcerers and wizards cast arcane spells, clerics and paladins cast divine spells, druids cast nature spells, and warlocks cast pact spells.

magical: A magical ability is an ability whose origin derives from magic. Examples include [spells](#), a dragon's ability to fly, and a paladin's ability to smite foes. For details, see Magical Abilities, page ??.

magical power: Your magical power is your [power](#) with [magical](#) ✨ abilities. It is typically equal to half your level + your Willpower. For details, see Power, page ??.

maneuver: A maneuver is a type [mundane](#) ability that some classes grant access to through particular combat styles. For details, see Combat Styles, page ??.

manufactured weapon: A manufactured weapon is a [weapon](#) that is external to its user's body. A [natural weapon](#) is not a manufactured weapon. Some abilities affect or require manufactured weapons instead of natural weapons.

melee: A melee attack is an attack using your body or a weapon that does not leave your grasp. Unless you are using a [Long](#) weapon, you can only make melee attacks against targets adjacent to you.

metallic: A creature is considered metallic if it is wearing metal armor or otherwise carrying a significant amount of exposed metal. This includes any [body armor](#) with a metal material type. It also

includes exposed metal objects or parts of objects that are no more than two size categories smaller than the creature. This includes most weapons with any metallic components. It does not include creatures who have small amounts of metal safely stowed in larger containers, such as a common amount of coins or metallic tools stowed in a coin purse or backpack.

Similarly, an object is generally considered metallic if it has an exposed piece made of metal that is no more than two size categories larger than the object as a whole.

midair: A land-based creature typically suffers a -4 penalty to its Armor and Reflex defenses while it is in the air and unable to touch the ground and move normally. This applies even if the creature has a fly speed or glide speed. However, it does not apply to creatures who are native to the air, such as birds and monsters with no defined land speed.

minor action: You can take one minor action each [round](#) during the [action phase](#). For details, see Actions, page ??.

miss chance: If you have a miss chance with an [attack](#), you have a random chance to miss with the attack. You roll the miss chance first, and if it causes you to miss, you do not roll an ordinary attack roll. In general, only [targeted](#) attacks can have a miss chance. If you have multiple miss chances, only the highest one applies.

move: When you move, you usually travel a distance equal to your speed. See Movement and Positioning, page ??, for details. For specific actions that involve movement, see [movement](#).

movement: You can make one movement during the [movement phase](#) of each round. Abilities that require a movement typically move you around the battlefield. For details, see Movement and Positioning, page ??.

movement mode: A movement mode is a method of moving from one location to another. The most common mode is a [land speed](#). For details, see Movement Modes, page ??.

movement phase: The movement phase is the first of two [phases](#) in a combat [round](#). During the movement phase, creatures can make [movements](#) (see Movement and Positioning, page ??). The movement phase is followed by the [action phase](#).

multiclass: A multiclass character can gain access to [archetypes](#) and other abilities from multiple classes. For details, see Multiclass Characters, page ??.

mundane: Most abilities are considered mundane abilities. Mundane abilities have some form of natural explanation and do not fundamentally originate from a magical source. Examples include weapon attacks, a dragon's frightful presence, and a barbarian's rage. Unless otherwise indicated, all abilities are mundane in nature.

mundane power: Your mundane power is your [power](#) with [mundane](#) abilities. It is typically equal to half your level + your Strength. For details, see Power, page ??.

mystic sphere: A mystic sphere is a collection of thematically related magical effects that includes both [spells](#) and [rituals](#). For details, see Mystic Spheres, page ??.

natural weapon: A natural weapon is a [weapon](#) that is part of a creature's body. For details, see Natural Weapons, page ??.

overrun: An overrun is a combat ability that allows you to move

directly through creatures. For details, see Overrun, page ??.

Perception: Perception is an [attribute](#) that describes your ability to observe and be aware of your surroundings. For details, see Perception, page ??.

phase: A phase is part of the combat [round](#). There are two phases: the [movement phase](#) and the [action phase](#). For details, see Phases, page ??.

planar rift: A planar rift is a location where the boundaries between planes are unusually thin. Planar rifts can be used to travel between planes using the appropriate rituals. For details, see the Tome of Guidance.

plane: A plane is a distinct realm of existence. Except for the connections between planes through [planar rifts](#), each plane is effectively an isolated universe, and different planes can obey different fundamental laws. For details, see the Tome of Guidance.

point of origin: A point of origin is the grid intersection, creature, or object that an area originates from. For details, see Area, page ??.

poison: For a description of poisons and how they work, see Poison, page ??.

poison stage: Each [poison](#) progresses in a series of stages. Each stage inflicts a particular negative effect on the poisoned creature according to the poison's description. For details, see Poison, page ??.

potion: A potion is a magical liquid that is typically contained in a Fine vial. In general, drinking a potion requires a standard action. Potions cannot be safely mixed together without diluting their magic, so you cannot consume two potions with the same action.

power: The power of an [ability](#) represents how strong the ability is. For details, see Power, page ??.

primary target: Some abilities that affect multiple targets distinguish between their primary and secondary targets. For details, see Primary and Secondary Targets, page ??.

proficient: A creature can be proficient with weapons and armor. You take a -2 accuracy penalty with weapons you are not proficient with. If you wear or use armor you are not proficient with, it provides half its normal defense bonus. In addition, you apply that armor's [encumbrance](#) as a penalty to your [accuracy](#).

projectile: A projectile is an object fired from a weapon at a target. Arrows and bolts are projectiles.

push: A push is a type of [forced movement](#). It represents being pushed by a constant force. If a creature being pushed encounters an obstacle, it stops moving with no negative consequences. You cannot be pushed vertically, only horizontally along a solid surface. A push movement is always a single straight line.

range: The range of an ability determines how far away it can be used. Unless otherwise noted, all abilities with a range require both [line of sight](#) and [line of effect](#) to the point of origin or to all targets. There are five standard ranges: Short (30 ft.) range, Medium (60 ft.) range, Long (90 ft.) range, Distant (120 ft.) range, and Extreme (180 ft.) range. For details, see Range, page ??.

range limit: Ranged weapons have two [range limits](#) listed, with a slash between them, such as 60/180. The first number indicates

the maximum range for a weapon's [close range](#). The second number indicates the maximum range for a weapon's [long range](#). For details, see Weapon Range Limits, page ??.

rank: Many abilities have a rank. This is typically equal to the minimum [archetype rank](#) you need to learn or use the ability. For abilities with no explicitly defined rank, use one third of the minimum level required to learn or use the ability (minimum 0).

rare language: Rare languages are languages that are only spoken by rare or distant creatures or cultures. They are described in Table ??: Rare Languages, page ??.

reactive attack: A reactive attack is an [attack](#) that you make during the resolution of another creature's actions. You cannot modify a reactive attack in any way - it happens entirely outside of your control. For example, you cannot use the [desperate exertion](#) ability to reroll a reactive attack. If you would make multiple reactive attacks during the same phase with the same ability against different targets, use the same attack roll for each target. A reactive attack can never be triggered by a reactive attack or reactive check.

reactive check: A reactive check is a [check](#) that you make during the resolution of another creature's actions. Just like a [reactive attack](#), you cannot modify a reactive check in any way.

reroll: Some abilities allow you to reroll a roll you just made. The most common ability that allows rerolling is [desperate exertion](#) (see Desperate Exertion, page ??). You must reroll the entire roll, not just one die from the roll (such as if the original roll [explodes](#)). It is possible to reroll the same same roll multiple times with different abilities. Each reroll only grants one extra roll.

resource: A resource is something that a character can lose during play or expend to gain a benefit. Most resources are shared between all types of characters, though different characters can use them differently. There are two resources that are used during the character creation and leveling process: [insight points](#) and [trained skills](#). In addition, there are five resources that are used during gameplay: [attunement points](#), [damage resistance](#), [fatigue level](#), [hit points](#), and [vital wounds](#).

resurrection: When a creature is resurrected, it comes back to life after being dead. For details, see Resurrection, page ??.

ritual: A ritual is a complex [magical](#) ✨ ceremony that has a specific effect when completed. For details, see Spells and Rituals, page ??.

round: Combat takes place in a series of rounds, which represent about six seconds of action. Rounds are divided into two [phases](#): the [movement phase](#), and the [action phase](#).

secondary target: Some abilities that affect multiple targets distinguish between their primary and secondary targets. For details, see Primary and Secondary Targets, page ??.

scent: A creature with the scent ability has an unusually good sense of smell. For details, see Scent, page ??.

scrying sensor: A scrying sensor is a magical construct created by some magical abilities. Scrying sensors are Fine objects resembling a human eye in size and shape, though they are [invisible](#). Scrying sensors typically float in a fixed position in the air. They normally can't be moved by external forces without destroying the sensor. Unless otherwise specified, a scrying sensor's visual acuity

is the same as that of a normal human, giving it a +0 bonus to the Awareness skill and similar checks.

sentient: A sentient creature is capable of experiencing emotions and perceiving its surroundings. Complex animals are sentient, but trees are not. Some creatures have incomplete minds that are capable of simulating intelligence without true sentience. These creatures are called [simple-minded](#).

shadowed: A creature or object is shadowed if it is not in [bright illumination](#) or [brilliant illumination](#).

shadowy illumination: In an area with shadowy illumination, creatures can see dimly. Creatures and objects within this area have [concealment](#), which can allow creatures to make Stealth checks to hide (see Stealth, page ??). For details, see Vision and Light, page ??.

shapeshift: Shapeshifting abilities change the physical form and abilities of a creature or object. For details, see Shapeshifting, page ??.

shield: Shields are a form of [armor](#) that you wield in a hand to protect you from harm. For details, see Armor, page ??.

short rest: A short rest represents ten minutes of relaxation. It allows you to regain lost [hit points](#) and any [attunement points](#) you released from [attunement](#). For details, see Short Rest, page ??.

size category: A creature's size category indicates how large it is. There are nine size categories, from smallest to largest: Fine, Diminutive, Tiny, Small, Medium, Large, Huge, Gargantuan, Colossal. For details, see Size Categories, page ??.

skill: A skill represents your degree of talent with a particular non-combat aspect of the world. For example, the Climb skill represents how skilled you are at climbing. For details, see Skills, page ??.

somatic components: Somatic components are hand motions required to cast arcane and pact spells. For details, see Casting Components, page ??.

space: Your space is the area that your physical body occupies. For convenience, your space is measured in five-foot [squares](#). Medium creatures occupy space equal to a single five-foot square. For details, see Size Categories, page ??.

speed: Your speed represents the number of feet you can move with a single movement (see Movement and Positioning, page ??).

spell: A spell is a discrete [magical](#) ✨ ability with combat-relevant effects. For details, see Spells, page ??.

spell list: The list of spells you can cast from a particular [magic source](#). Each spell source has a specific spell list which is described at Spells, page ??.

Most characters with the same spell sources have the same spell lists. However, some effects, such as a cleric's domains, can add spells to a character's individual spell list.

square: A square represents a single 5-ft. by 5-ft. space. Many areas are measured in squares for convenience.

standard action: You can take one standard action each [round](#) during the [action phase](#). For details, see Actions, page ??.

Strength: Strength is an [attribute](#) that measures your muscle and physical power. For details, see Strength, page ??.

strike: A strike is a single physical attack with a weapon. It

is the most common type of attack. You can make a strike as a [standard action](#) in the [action phase](#). For details, see Strikes, page ??.

subdual damage: Subdual damage is a special kind of damage that can't kill you. If you would gain a [vital wound](#) from subdual damage, you increase your [fatigue level](#) by three instead. For details, see Subdual Damage, page ??.

suppressed: A suppressed ability has temporarily ceased to function. It has no effect for as long as it remains suppressed. Time spent while suppressed counts against the ability's duration, and it may expire while suppressed if it lasts for a specific amount of time. Only [magical](#) ✨ abilities can be suppressed. Mundane results of magical abilities that have already occurred, such as the water created by a [create water](#) ritual, cannot themselves be suppressed, and do not disappear if they enter an area that suppresses magical abilities.

sustain: Some abilities last as long as you sustain them. Each ability specifies a particular action that is required to sustain the ability, such as a [minor action](#). When [Swift](#) abilities resolve during each [action phase](#), the ability is dismissed unless you take the action to sustain the ability that round. For details, see Sustained Abilities, page ??.

Swift: An ability with this [ability tag](#) resolves its effects before other actions in the same phase. For details, see Swift Abilities, page ??.

swim speed: A creature with a swim speed can swim as easily as a human walks on land. The effects of a swim speed are described at Swim Speed, page ??.

target: A target is a creature or object directly affected by an ability. Many abilities only affect a single target, and some affect a specific number of targets.

target square: A target square is a particular [square](#) that an attack is made against. A target square is chosen to determine [cover](#) and [concealment](#) (see Cover, page ??).

targeted: A [targeted](#) ability is an ability that allows you to directly choose which targets the ability affects. A spell that affects an area is not a targeted ability, because you choose the area affected instead of choosing the targets directly. A [strike](#) is a targeted ability, and so is a spell or other special ability that causes you to immediately make a single strike.

telepathy: A creature with telepathy can mentally communicate with other creatures within a given range. For details, see Telepathy, page ??.

teleportation: A creature or object that is teleported instantly leaves one location and arrives at another. Unless otherwise specified, teleporation requires [line of sight](#), [line of effect](#), and an unoccupied destination on stable ground. For details, see Teleportation, page ??.

thrown weapon: A thrown weapon is a weapon designed to be thrown at a target. For details about attacking with thrown weapons, see Basic Strike – Thrown, page ??.

touch: You can touch an adjacent creature if it is an [ally](#) or if you beat its Reflex defense (see Touch, page ??).

trained skill: If you are trained in a [skill](#), you have learned how

to use it well. Your modifier with a trained skill is equal to 3 + the higher of its associated attribute (if any) and half your level. For details, see Trained Skills, page ??.

unattended: An unattended item is an item not being held or carried by a creature, or that is being held or carried by an [ally](#). Some abilities can only affect unattended items.

unaware: See Circumstances and Debuffs, page ??.

unconscious: See Circumstances and Debuffs, page ??.

undergrowth: The presence of a significant amount of roots, bushes, and similar plants that can obstruct movement is called undergrowth. There are two kinds of undergrowth: [light undergrowth](#) and [heavy undergrowth](#). For details, see Undergrowth, page ??.

usage class: The [usage class](#) of armor is a measure of how much effort it takes to use it. There are three usage classes: light, medium, and heavy. For details, see Armor Usage Classes, page ??.

verbal components: Verbal components are words required to cast most spells. For details, see Casting Components, page ??.

Visual: See Ability Tags, page ??.

vital wound: A [vital wound](#) is a serious injury that inflicts negative effects on you. You gain one or more [vital wounds](#) when you take damage in excess of your hit points (see Negative Hit Points, page ??). For details, see Vital Wounds, page ??.

vulnerable: A vulnerable creature takes a -4 penalty to all defenses against whatever it is vulnerable to. For details, see Vulnerable, page ??.

wall: A wall is an area shape that an ability can have (see Area Shapes, page ??). A wall-shaped area has a length and height, but its width is not measured in squares.

weak strike: When you make a weak strike, you halve flat damage bonuses, such as from your [power](#). Weak strikes do not halve flat damage penalties, such as if you have a negative power.

weapon: A weapon is an object used to inflict damage. Some creatures can treat parts of their body as weapons. For details, see Weapons, page ??.

weapon damage: Your weapon damage is the damage you deal with weapons. Typically, weapon damage is dealt by [strikes](#) (see Strikes, page ??). You gain a bonus to your weapon damage equal to half your [power](#) (see Power, page ??). For details, see Weapon Damage, page ??.

weapon group: A weapon group is a category of [weapons](#) with a similar design and fighting style. Some abilities grant you proficiency with or special abilities with particular weapon groups. For details, see Weapon Groups, page ??.

weapon tag: A weapon tag describes the special effects of a weapon. For details, see Weapon Tags, page ??.

weight limit: Your weight limits define the amount of weight you can carry or push without penalty. For details, see Weight Limits, page ??.

weight category: The weight category of an object or creature is a broad measurement of how much it weighs. Weight categories are closely related to [size categories](#). For details, see Table ??: Weight Categories, page ??.

Willpower: Willpower is an [attribute](#) that represents your ability

to endure mental hardships. For details, see Willpower, page ??.

vital roll: When you gain a [vital wound](#), you make a [vital roll](#) to determine the detrimental effect of the [vital wound](#). To make a [vital roll](#), roll 1d10 – the number of [vital wounds](#) you already had, ignoring the vital wound you are rolling for. For details, see Vital Wounds, page ??.

zone: A zone is a type of area that an ability can have (see Area Types, page ??). A zone ability has effects within an area for the duration of the ability. Unless otherwise noted, it does not move after being created.

Acknowledgements

A number of marvelous people have helped me make this revision possible, and many clever minds produced ideas I that have incorporated into the new system. I cannot hope to properly credit everyone who contributed, knowingly or otherwise, but I can at least make an attempt here. The following individuals have my gratitude:

Connor Haines, for being a great brainstorming partner and excellent roommate.

Zontan Ferrah, for frequently telling me when my ideas were stupid. Sometimes he was even right.

Desmond Henderson, for his remarkably thorough and insightful feedback, and for being the first person brave enough to run a game with Rise.

Kyle McCauley, Linchaun Zhang, and Scott Kottkamp for helping to correct foolish errors that once littered this document and for providing ideas about how to improve the system.

Tarkisflux, for his excellent [Tome of Prowess](#), feedback on spell design, and more.

Kholai, for keeping me on my toes in our monstrously long discussions of rules minutia.

Douglas Milewski, for his insightful essay on the nature of fighters. It helped inspire me to think that I could make D&D right.

Rich Burlew, for providing a forum for house rule enthusiasts like myself to gather and for his insightful articles that guided my thought.

Shannon Carty, for the donation of her vocabulary.

Dave Rosenberg, for his insight into the nature of druids.

Ryan Beck, for his helpful commentary and criticism.

Jordan MacAvoy, for his endless patience and creativity that repeatedly revealed flaws in the wording and design of this book.

Wizards of the Coast, for making a great game and releasing it under the OGL license, which makes all of this tinkering possible.

In addition, the art for this book came from [Stable Diffusion](#) and [Dall-E 2](#), which is very exciting! We live in the future!
